Cat. 40 Moss

We, at Rossini, are recognized as leather sofas specialist, with a wide range of leathers able to meet all customer needs and demands.

In our collection you can also find an exclusive Nabuk leather with a vintage style, very soft at the touch with deep and warm colors, a new trend in the furniture fashion.

The Nabuk leathers are nice, beautiful and soft, obtained through a special tanning and drumming process, that might appear as a weak point while selling sofas in these leathers.

Rossini, in partnership with the tanneries, developed a new leather with the Nabuk effect, with a unique features and that can be cleaned in case of accidental stains or spills such as wine, mayonnaise, ketchup, olive oil, coca cola and etc.

The name is Leather Moss, a special and unique leather in its range, able to turn a weakness point into strength. The Moss leather represents a new trend in the Furniture fashion. Balanced combination between modern stylistic needs and vintage style. The softness is obtained through the special retanning and drumming process that makes the leather full-bodied and with a light grain very pleasant to the look at. With a semi-aniline finishing applied on the small grain and the further treatment, we are able to obtain a musk look on the surface and a pleasant sensation of tactile velvet touch. The Moss leather, thanks, to its softness and vintage look lends itself very well to dress up any sofa, ranging from classic to the modern designs. The range of colors has been carefully selected to combine the NEW AGE look and different styles to satisfy and meet the demands of our customers.

Cat. 40 Seta

Leather article SETA, has a great role in the category of the high-quality coverings. The name itself expresses an evergreen concept which makes this article unique.

The main characteristics of Seta leather article is the depth of shade, transparency and brightness. The hand is round with a silky touch. The small grain surface is obtained thanks to a special vacuum drying tanning process, that keeps the leather naturalness. This vacuum drying tanning process is mainly used in leather goods and leather garments sectors, in order to give the leather a fullness effect and keep the surface unchanged, allowing to highlight the depth of shade and different natural nuances. Seta leather article has a thickness of 1.1 – 1.3 mm. The finish process enhances the look and warmth and gives this leather a pleasant touch.

Specific Leather Care: Avoid direct sunlight. Avoid exposure to heat sources. Clean with a dry cloth, do not use of chemical cleaner.
